

Personal Reflection - cc211002 - Charles Anthony

My personal reflection working with the assignments was that I gained a lot of knowledge about data visualization. Cleaning data, when to use what kind of a plot and how to style it with d3.js. I also picked up a lot of technical terms that are used in scientific research as well. And since my thesis is going to be in data visualization using historical data the two electives that i took in the third semester and the fourth are going to be very helpful to me this coming semester(fifth)
